

SOP: ACCOUNT ACCESS RECOVERY

Document ID	SOP-04
Version	2.0
Effective Date	10/2/2026
Department	Call Center Operations

Applies to: All Tier 1 agents. Highest fraud-risk SOP — no shortcuts permitted. No credential resets without full verification.

Steps

Step 1: Open Call & Attempt Standard Verification

Precondition	Call connected.
Action	Deliver greeting and recording notification. Attempt 3-of-5 identity verification: (1) Full account holder name, (2) Account number, (3) Security PIN, (4) Last 4 of payment method, (5) Last 4 of SSN/National ID where applicable. If the caller cannot provide 3 of 5, proceed immediately to Step 2.
Output	Verification passed → proceed to Step 3. Verification failed → proceed to Step 2.
Policy Ref	CS-RULE-004, CS-RULE-005, SEC-RULE-006

Step 2: Handle Partial Verification Failure

Precondition	Customer cannot complete 3-of-5 verification.
Action	Attempt alternatives in order: (1) Send one-time code to email address on file. (2) Ask for account number from a recent paper bill or email invoice. (3) Ask for a recent payment amount as a soft identifier. If still unable to verify: inform customer they must visit a NexaLink store in person with a government-issued photo ID. Do not reset credentials over the phone without successful verification.
Output	Customer verified via alternative, or directed to in-store visit.
Policy Ref	SEC-RULE-007

Step 3: Confirm Nature of Access Issue

Precondition	Verification complete.
Action	Identify what the customer needs. Forgotten online password: direct to self-service portal — no agent action required. Forgotten PIN or security question: agent updates in CRM after verification. Locked account: agent unlocks in CRM. Suspected unauthorized access: proceed to Step 6 immediately.
Output	Access issue classified and action path selected.
Policy Ref	SEC-RULE-006

Step 4: Process Credential Update

Precondition	Issue is PIN or security question reset.
Action	Confirm new PIN meets complexity requirements. Update in CRM. Confirm to customer: 'Your account PIN has been updated successfully. Please make a note of it in a secure place.' Do not read the new credential back to the customer. Do not record the PIN value in case notes — document only that a reset was performed.
Output	Credential updated. Customer confirmed.
Policy Ref	SEC-RULE-005, SEC-RULE-007

Step 5: Check for Authorized Users (Third-Party Callers)

Precondition	Caller is requesting access changes on behalf of account holder.
Action	Verify the caller is listed as an Authorized User in the CRM. If not listed: no changes can be made. Account holder must call directly or visit a store. If account holder is deceased or incapacitated: escalate to Tier 3 for ownership transfer — do not attempt at Tier 1.
Output	Third-party access confirmed or denied.
Policy Ref	CS-RULE-006

Step 6: Suspected Unauthorized Access Protocol

Precondition	Customer reports or agent suspects unauthorized access.
Action	Do not make any account changes. Flag account as 'Security Review' in CRM. Escalate to Tier 2 immediately. Advise customer to change all associated passwords (email, banking). Inform customer that the Data Compliance team will follow up within 72 hours.
Output	Account flagged. Tier 2 escalated. Customer advised.
Policy Ref	SEC-RULE-008

Step 7: Document & Close

Precondition	Resolution complete.
Action	Log case notes within 5 minutes: verification method used, type of access issue, action taken, any security flags raised. Do not include any credential values in notes. Provide case reference number and offer post-call survey.
Output	Case notes saved. Call closed.
Policy Ref	CS-RULE-020, CS-RULE-021, CS-RULE-022, SEC-RULE-005

Key Rules

- Never confirm whether an account exists to an unverified caller. (SEC-RULE-006)
- Never reset credentials over the phone without successful verification. In-store visit is the only alternative. (SEC-RULE-007)
- If a third-party caller becomes aggressive when denied access, escalate to Tier 3 immediately. Do not de-escalate by relaxing verification requirements. (CS-RULE-006)
